

Explain Everything

Institutional Deployment
of the **Explain Everything**
Whiteboard

Version History

Version	Date	Changes
1	30.05.2016	Initial version
1.1	31.05.2016	Apple Profile Manager setup
1.2	01.06.2016	IBM MaaS360
1.3	01.06.2016	General Revision by Reshan
1.4	10.06.2016	VMware Airwatch manual added
1.5	14.06.2016	MDM managed app configuration options added (point 5)
1.6	25.07.2016	CSV upload of email addresses
1.7	19.08.2016	MobileIron CLOUD manual
1.8	22.08.2016	MobileIron CORE manual
1.9	11.10.2016	Support for shared iPads / iCloud
2.0	05.12.2016	Chromebook management
2.1	31.05.2017	Subscription details update
2.2	11.09.2017	Google Classroom integration
2.3	12.09.2017	User removal
2.4	18.09.2017	SCCM Deployment
2.5	12.10.2017	Cisco Meraki manual
2.6	16.12.2017	ZuluDesk manual
2.7	09.05.2018	SSO
2.8	19.12.2018	Enable Web Browser object via MDM
2.9	08.11.2019	Mosyle Manager and Mosyle Business MDMs/ App Config generator tool

3.0	08.01.2020	Chromebook + Chrome Devices Installation
3.1	15.10.2020	Chromebook & Android Installation
3.2	15.04.2021	New MDM parameter to disable app activity reporting
3.3	14.06.2021	App Name Change, Explain EDU renamed to Explain Everything Basics

Institutional Deployment of the Explain Everything Whiteboard

We've continued to work hard on making deploying Explain Everything as easy as possible for schools, businesses, and other large groups. Here is how to centrally purchase and deploy Explain Everything in 3 easy steps:

1. **Purchase licenses** for the desired number of users.
2. **Install the application** on user devices via MDM, Chrome Device Management, or manually.
3. **Register user licenses** via CSV upload of email addresses or by distributing a CODE.

Table of Contents

7. Appendix: Network requirements	52

1. Purchase Licenses

- Please visit <https://explaineverything.com/pricing/>.

2. Install the Application on user devices

Regardless of whether you have purchased licenses or are just interested in conducting a trial at your institution, you can follow the steps in this section to make the application available on user devices. If the application is already installed but you need to apply the purchased licenses, please go to [Register User Licenses](#).

2.1 iPad + MDM (JAMF, Airwatch, Mosyle, etc.)

These steps are for iPad deployments using some form of Mobile Device Management (MDM) for managing devices, users, and applications.

- In the 'Apps' section of your MDM, search for and add the free Explain Everything Whiteboard app (not to be confused with the paid [Explain Everything Basics app](#)).
- Add the application and assign it to users in the same way you would with any other free application.
- Proceed to [Register User Licenses](#)
- For screenshots from a specific MDM, click a link below:
 - [JAMF/Casper/JSS](#)
 - [Apple Profile Manager](#)
 - [IBM MaaS360](#)
 - [Mobile Iron](#)

- [Cisco Meraki](#)
- [FileWave](#)
- [Jamf School](#)
- [Mosyle Manager](#)
- [Mosyle Business](#)
- [Other](#)

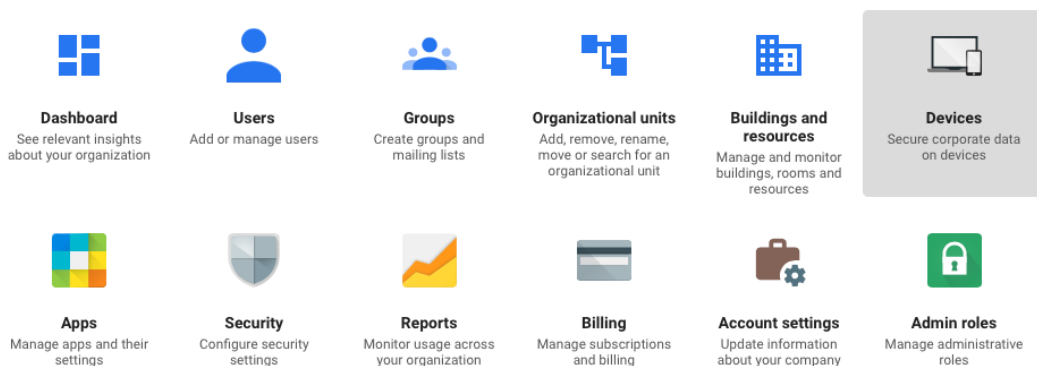

2.2 Chromebook + Chrome Device Management

Bulk installation of the Explain Everything Whiteboard can be done through the Google Admin Console (admin.google.com). Once licenses are deployed, they can be activated in the Explain Everything Drive (<https://drive.explaineverything.com>). *It's advised to set the app as "force-installed" to minimize waiting time for users.*

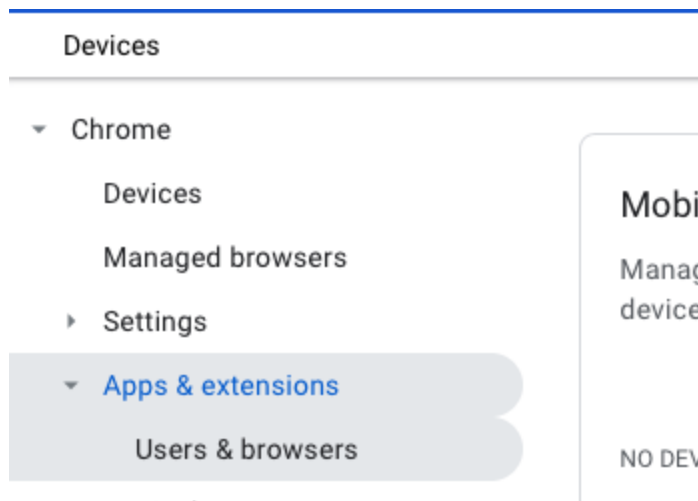

The Explain Everything Whiteboard app can be installed from the [Google Play Store](#). For the list of devices compatible with Chromium OS please consult [the official Chromium OS project page](#).

Installation from the Google Play Store

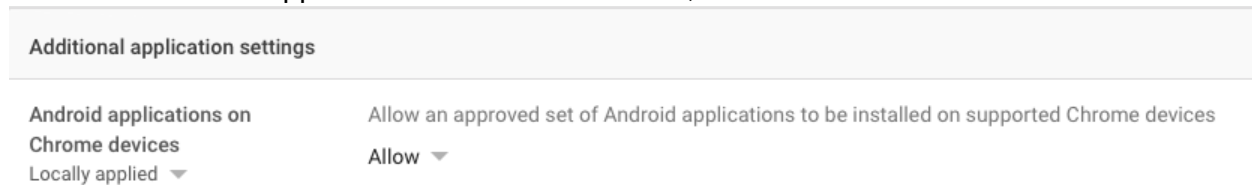

- Go to <https://admin.google.com>, sign-in and click **Devices**

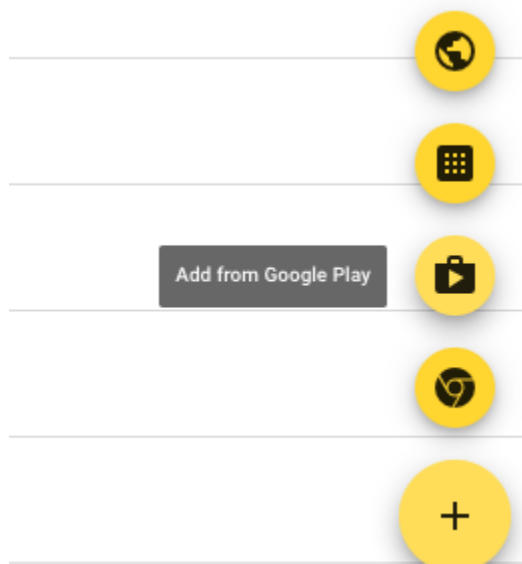

- Click **Chrome->Apps & extensions -> Users & browsers management**

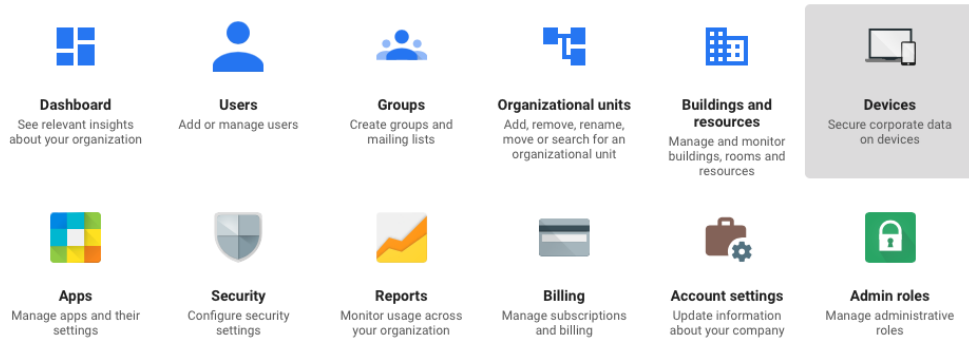

- On the far right, click Additional settings ⚙️.
- For Android applications on Chrome Devices, select Allow.

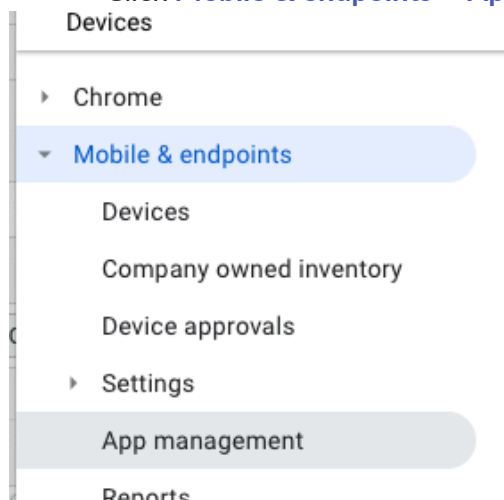

- Go back to [Apps & Extensions](#), select an organizational unit and hit the plus button and then “Add from Google Play”

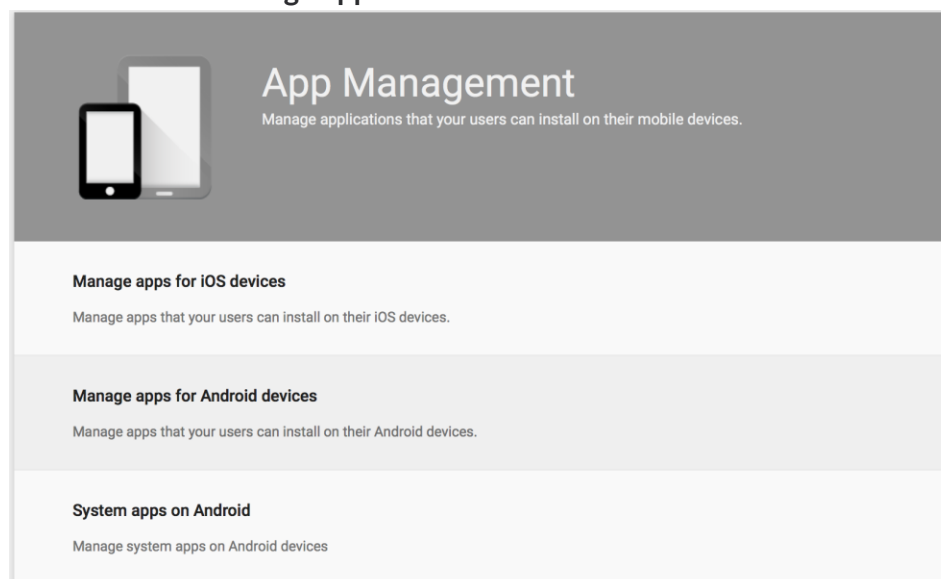

- Search for “Explain Everything Whiteboard” and select the app

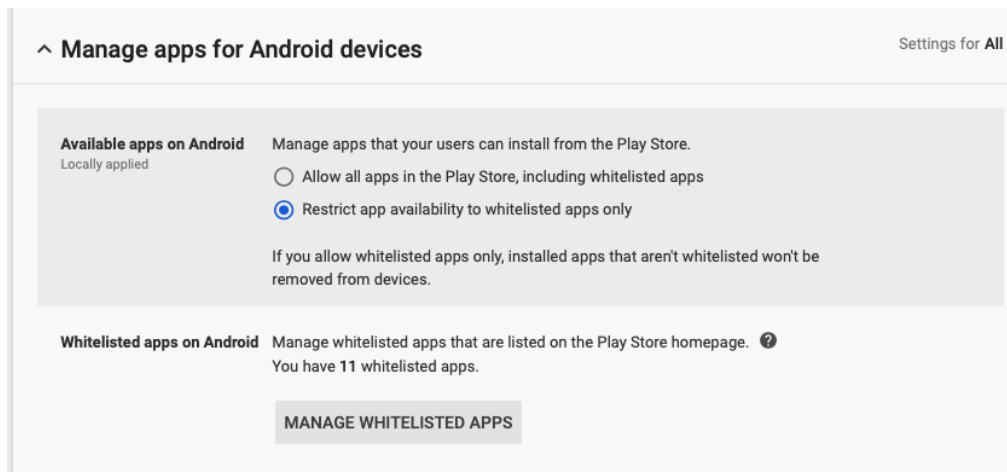

- Click **Mobile & endpoints** -> **App management**

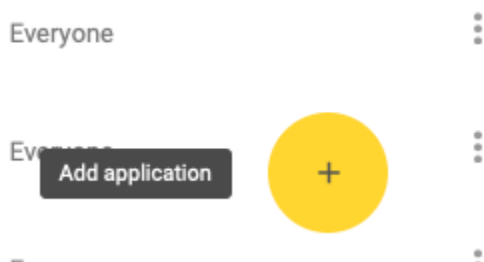

- Choose **Manage apps for Android devices**

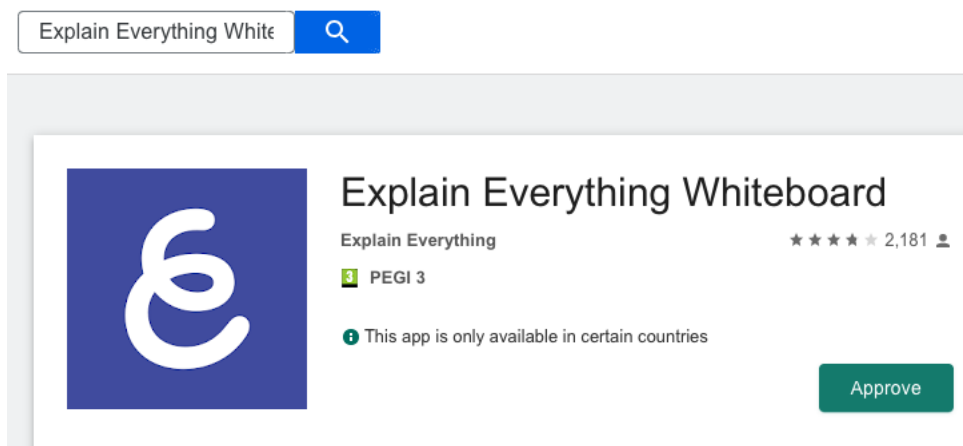

- Use the “**Manage Whitelisted Apps**” button

- Hit the plus button in the bottom right

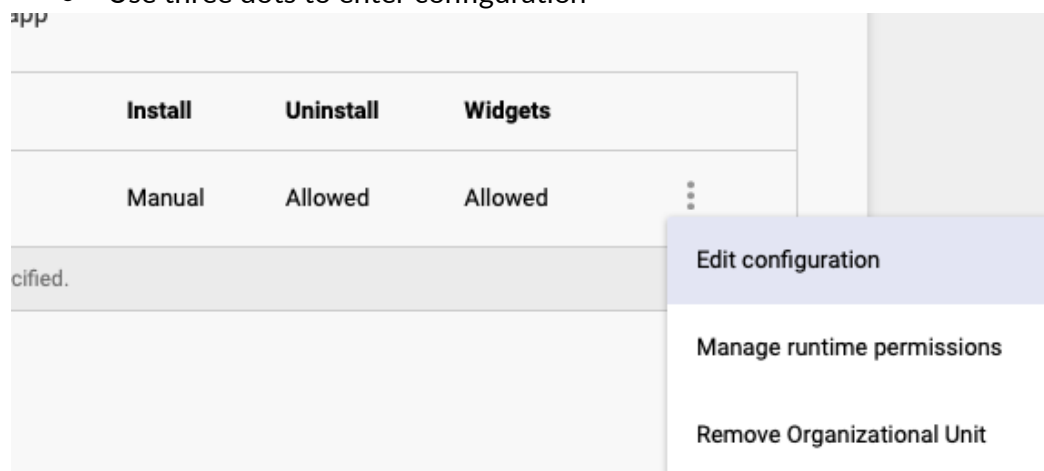

- Search for “Explain Everything Whiteboard” and approve the app

- Go back to the app list, click the Explain Everything Whiteboard row to enter the app details

	Google Meet - Secure Video Meetings Google LLC	Public
	Explain Everything Whiteboard Explain Everything	Public
	Google Chrome: Fast & Secure Google LLC	Public

Edit App Configuration

Explain Everything Whiteboard has been whitelisted for users in the following OU: gedu.demo.explaineverything.com (and its sub-Organizational Units)

Configuration options for all users of Explain Everything Whiteboard

- ☒ Automatically install app on all devices
 - ☐ Users cannot uninstall the app
- ☒ Allow users to add widgets from this app to the Home screen
- ☐ Use as Always On VPN. [Learn more](#)

CANCEL UPDATE

- Hit Update

2.4 All Others

- (Mixed deployment, iPad but no MDM, Android)

Instruct users to download and install the free application from the appropriate store in the same way they would download any other free application for their device.

- iPad (App Store): <https://itunes.apple.com/us/app/explain-everything/id1020339980?mt=8>
- Android & Chromebook (Google Play Store):
<https://play.google.com/store/apps/details?id=com.explaineverything.explaineverything&hl=en>

3. Register User Licenses

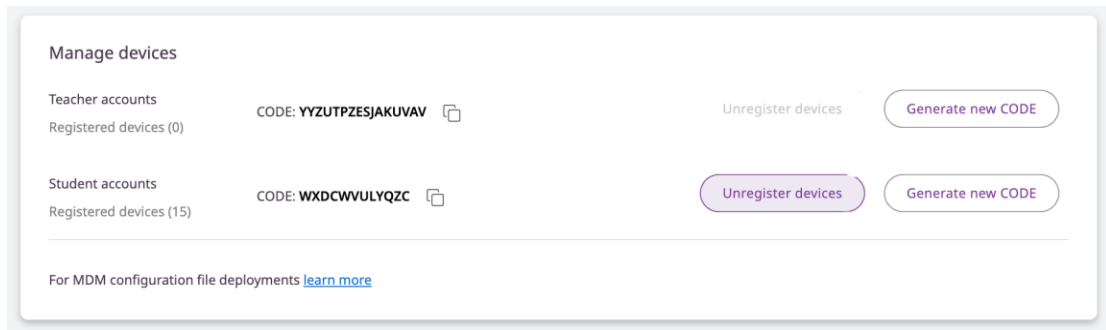

Once licenses have been purchased and the application has been installed on devices, the licenses must be registered to users and devices in your institution.

For all deployments, you must first go to the purchasing account's [Explain Everything Drive profile](#) where you can find your admin panel with all available options.

3.1 iPad + MDM

iPad deployments via MDM can register user licenses so that individuals in the institution will not need to register an account with Explain Everything unless they want to upload content to the Explain Everything Drive.

- Go to the purchasing account's [Explain Everything Drive profile](#).
- Copy the 12-digit 'Student (Member) accounts' CODE

- For your specific MDM, click the link below and follow the steps for creating and adding an app configuration to push to your users/devices.
 - [JAMF/Casper/JSS](#)
 - [Apple Profile Manager](#)
 - [IBM MaaS360](#)
 - [Mobile Iron](#)
 - [VMWare Airwatch](#)
 - [Cisco Meraki](#)
 - [Other](#)
- Once pushed to users, they will be able to use the application with all of the Premium features without needing to create user accounts. However, to use real-time distance collaboration and Explain Everything Drive, user accounts are needed. Follow the steps in the appropriate following subsection for user account creation.

3.2 Google Classroom

Please check out our [video tutorial](#).

3.3 Register an Email Domain

Another option to distribute the app license is to automatically attach all new users from a given domain (email address @extension) to the Admin account. Please contact support@explaineverything.com if you wish to use this option.

3.4 CSV Upload (Email Addresses)

You can invite all your students and teachers at once using the “Upload invitation list” feature. To do that, create a .csv list of your students or teachers. The list should include name,email headers, meaning their names and emails should be separated with a coma or with a semicolon. You can also create a list in Excel/Numbers and export it as a .csv file.

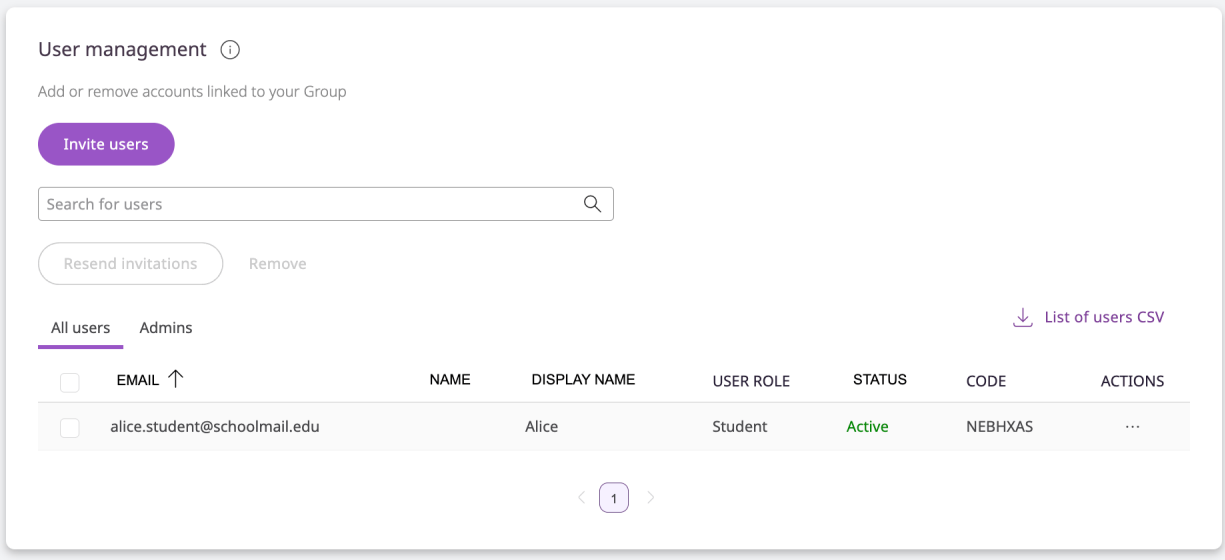

Example:

```
name,email
name1,sampleemail1@edu.org
name2,sampleemail2@edu.org
name3,sampleemail3@edu.org
name4,sampleemail4@edu.org
```

When your list is ready, log in to your Admin account, select your profile picture in the top right corner of the Explain Everything Drive and go to Account. Scroll down to the User Management section, click **Invite users - Invite members/students**. Select Choose a list button and select Upload a CSV file option. Then, upload the CSV list with the button at the bottom of the screen.

The invitations sent to existing free accounts will be automatically accepted.

After the list is uploaded, you can check the status of the invitations and what display names the accounts have been activated with. You can also generate a new code for a given invitation or delete the invitation altogether.

3.5 All Others

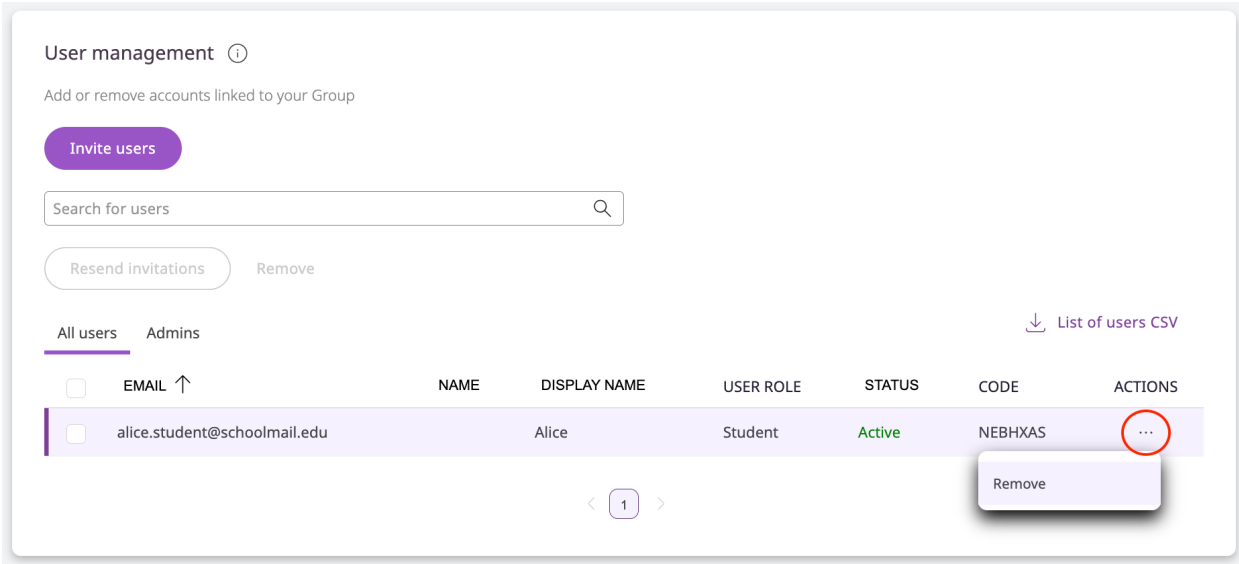

Instruct users to visit <https://drive.explaineverything.com> and enter the copied Member Account CODE to begin account creation. A username and password are all that are needed.

4. Remove Users

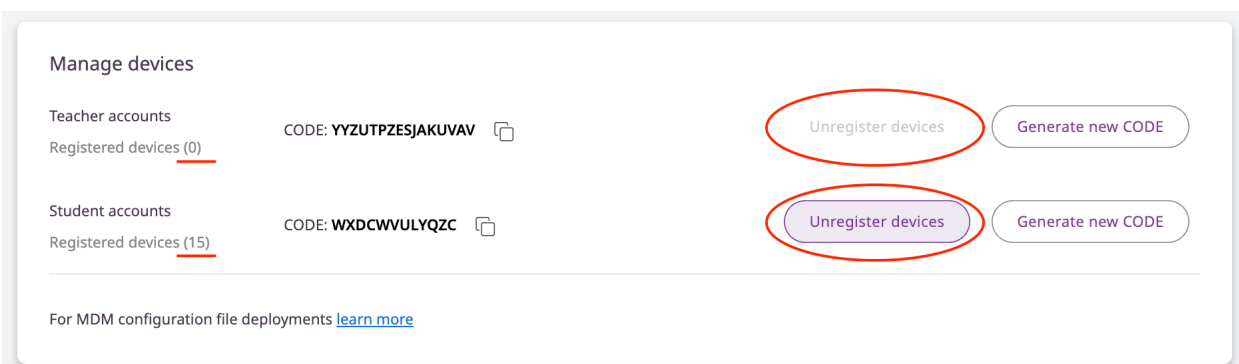

4.1 Manual

Please open the [user profile](#) on the Explain Everything Drive, scroll down to the User Management section, and click on the menu button next to a specific user.

In the drop-down menu, you will find the option to remove a user from your group.

If you've deployed the licenses through MDM, click on the Unregister devices button to clear the licenses deployed to the devices to reset the seats assigned to your Group Account. Please note that this operation will only reset the list of registered devices. At the next launch of the Explain Everything Whiteboard application, the devices will again automatically register. This function can be used to free up licenses occupied by already decommissioned devices. To prevent automatic registration from a device please remove the app or send a blank configuration via MDM.

4.2 CSV Upload

It is possible to detach sponsored users from the account by uploading a new complete list of users.

To do so please:

- Prepare a complete list of users to be sponsored: Students (Members) or Teachers (Managers)
- Open the [User Profile](#) on the Explain Everything Drive.
- Scroll to the User Management section and click on the 'Invite users' button.

About App Configurations

Install on device

This configuration option decides whether to prompt and require this app to be installed on devices by the end user. The installation will be silent on iOS devices that are supervised. This has a default configuration that can be edited but not prioritized.

All Users

Install Application configuration settings.

Allows specifying install settings for an application.

All Users

iOS App Settings

This enables ability to prevent backup to iCloud and iTunes and or remove apps on un-enrollment. This has a default configuration that can be edited but not prioritized.

All Users

iOS Application Management configuration settings.

Allows specifying application management configuration settings for iOS applications.

All Users

Promotion

Define how the app gets promoted and appears in the app catalog for specific groups or individuals. Options are: Not Featured, Featured List and Featured Banner. This has a default configuration that can be edited but not prioritized.

All Users

AppConnect Custom Configuration

Define custom key-value pairs based on app documentation to configure AppConnect-enabled applications.

← Back **Done**

If you wish to set additional parameters please consult the instructions provided in [Appendix 5](#).

5.5 MobileIron CORE

Adding the app

- In the Admin Portal, go to [Apps](#) > [App Catalog](#).
- Click the Quick Import button.
- Select [iOS](#) from the dropdown list that is displayed.
- In the Application Name field, enter **“[Explain Everything Whiteboard](#)”**.
- Click Search.
- Click the Import or Re-import link for

**Explain
Everythi
ng
Whitebo
ard**

- Close the dialog.
- The app is displayed in the App Catalog.
- Click the application name to view the app details.
- Click [Edit](#) to change the app settings.
- Mark the option **“[Allow conversion of apps from unmanaged to managed in \[Apps@Work\]\(#\)”](#)**
- Click Save.
- Click Back to list to return to the App Catalog.
- Select the app.

- Click [Actions](#) > [Apply To Label](#) to show the app in Apps@Work on devices associated with the label you select.

License assignment

- Please prepare app configuration .plist file using the sample below. Replace **CODE** with the license CODE from your user profile ([see point 3](#)). You can use any text editor or plist editor. Put the edited plist file into a folder accessible from your Admin Portal.

```
<?xml version="1.0" encoding="UTF-8"?>
<plist version="1.0">
<dict>
  <key>License</key>
  <string>CODE</string>
</dict>
</plist>
```

If you wish to set additional parameters, please consult the instructions provided in [Appendix 5](#) .

- In the Admin Portal, go to Policies & Configs > Configurations.
- Click Add New > iOS And OS X > Managed App Config.
- Use the following guidelines to create or edit a managed app config setting:

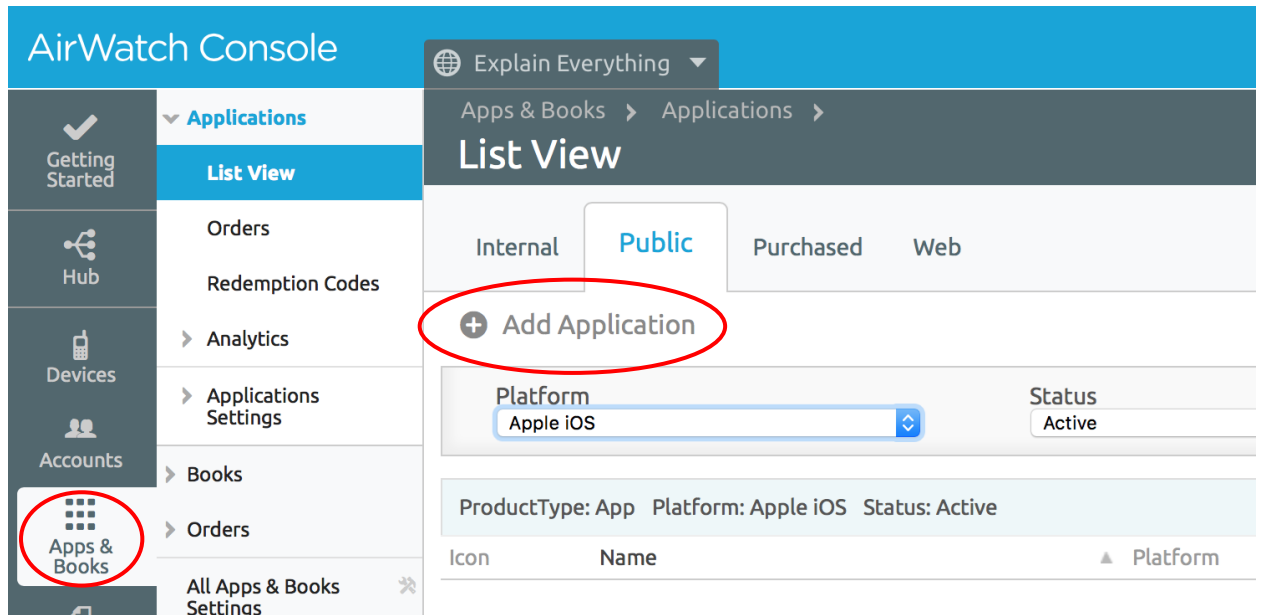

Item	Value/action
Name	Explain Everything Configuration
Description	Configuration of the Explain Everything App
BundleId	com.explaineverything.explaineverything
File	Select the prepared plist file

- Click Save.
- Select the managed app config setting you just created.
- MobileIron Core assigns the setting the type MDM APP CONFIG.

- Select More Actions > Apply To Label.
- Select the labels to which you want to apply this managed app config setting.
- Click Apply.

5.6 VMware AirWatch

2 / 11 Explain Everything Whiteboard

Explain Everything Whiteboard

Explain Everything sp. z o.o. iOS VPP Free Device Assignable

Teach, present, sketchnote, record videos, and work together, all in the Explain Everything Whiteboard. Compared to other tools, Explain Everything is the Swiss army knife of the whiteboarding apps. Due to its unique versatility, new possibilities to express knowledge are opened up, breaking down the boundaries of time and distance, allowing you to sketch, talk and share across a new landscape, digitally reimagining how you explain anything. Make the process of creating quality explainer videos a breeze. Share your whiteboard presentation either on site or at a distance. Open up an infinite digital space to visually brainstorm complex ideas and share invaluable feedback. • Bring in media directly from iCloud, GDrive, Box, Dropbox, OneDrive, or Evernote as well as export back to them. • Capture your interactions and voice to create just-in-time video messages and stories. • Whiteboard together in real time with voice chat on any device, anywhere. Invite guests with a link or project CODE to join you. Record everything and share later as a video. • Turn your infinite canvas into a mixed-media playground of videos, images, documents and sketches that combine screen and in-person ideas. Share

3. Choose the installation source (App Store or Apps and Books - VPP) > click on 'Add Application'
4. Search for "Explain Everything Whiteboard" and add it to your profile.
5. To apply the app configuration, click on the small 'c' icon. Please use the sample below as the XML configuration, replacing **CODE** with the license CODE from your user profile ([see point 3](#)).

If you wish to set additional parameters, please consult the instructions provided in [Appendix 5](#).

```
<dict>
  <key>License</key>
  <string>CODE</string>
</dict>
```

5.12 Other

For any MDM that supports the AppConfig standard, such as Lightspeed Mobile Manager, please consult the screenshots of the [JAMF/Casper/JSS](#) examples as they utilize the common method for pushing app configurations. Also see <https://www.appconfig.org/> for additional reference.

If you wish to set additional parameters please consult the instructions provided in [Appendix 5](#) .

6. Appendix: MDM managed app configuration

For detailed information on how to apply app configuration please refer to the [point 5](#).

If you wish to generate an app configuration, you can use the [AppConfig Generator](#) tool.

Alternatively, you can build the configuration file manually from the samples provided in the table below.

Group	Parameter name	Type	Meaning	Sample XML	Sample value
License	License	string	License key. Please see point 3 for reference . Please note that if license code is set, then, by default, the users will not be able to sign in or create an account . In order to enable please add <i>EnableAccountCreation</i> key as well	<code><key>License</key> <string>QXUP-ZVHM-PPTF</string></code>	QXUP-ZVHM-PPTF
	EnableAccountCreation	boolean	Enable EE Drive account creation if license key is present	<code><key>EnableAccountCreation</key> <true/></code>	True
WebDav	WebDAVServerAddress	string	Address of the WebDav server	<code><key>WebDAVServerAddress</key> <string>10.0.1.244</string></code>	10.0.1.244

	WebDAVServerPort	string	Port of the WebDav server	<key>WebDAVServerPort</key> <string> 5005 </string>	5005
	WebDAVUserName	string	User name of the WebDav server	<key>WebDAVUserName</key> <string> webdavtest </string>	webdavtest
	WebDAVPassword	string	Password of WebDav server user	<key>WebDAVPassword</key> <string> %pass </string>	%pass
Simple User Interface	SimpleUI	boolean	Simple User Interface	<key>SimpleUI</key> <true/>	True
Parental Gate	kParentalGateOn	boolean	Parental Gate	<key>kParentalGateOn</key> <true/>	True
Image from web	ImageFromWeb	boolean	Enable pull image from web functionality	<key>ImageFromWeb</key> <false/>	False
Web browser object	WebBrowserEnabled	boolean	Enable Web browser object	<key>WebBrowserEnabled</key> <false/>	True
Shared devices	SharediPads	boolean	Synchronize local projects with iCloud for shared devices. Please note that if you change this setting, then the app will no longer display previously created	<key>SharediPads</key> <true/>	True

			projects. The projects are stored either in the local or iCloud folder. If you already have local projects and wish to activate the feature then please export all projects to a destination and then import them after changing the setting.		
Integrations	MCESourceNamePhotos	Array value	Allow access to Photos	<pre><key>Integrations</key> <array> <string>MCESourceNamePhotos</string> <string>MCESourceNameMail</string> </array></pre>	
	MCESourceNameMail	Array value	Allow export via mail		
	MCESourceNameYouTube	Array value	Allow access to Youtube		
	MCESourceNameVimeo	Array value	Allow access to Vimeo		
	MCESourceNameDropbox	Array value	Allow access to Dropbox		
	MCESourceNameWebDAV	Array value	Allow access to WebDAV		
	MCESourceNameEvernote	Array value	Allow access to Evernote		

	MCESourceNameGoogleDrive	Array value	Allow access to Google Drive		
	MCESourceName iCloudDrive	Array value	Allow access to iCloud Drive		
	MCESourceNameSkoletube	Array value	Allow access to Skoletube		
	MCESourceNameOneDrive	Array value	Allow access to OneDrive		
	MCESourceNameBox	Array value	Allow access to Box		
	MCESourceName iTunes	Array value	Allow access to iTunes sharing		
Ad-Hoc Collaboration	AdHocCollaboration	boolean	Enable Local Network Collaboration	<key>AdHocCollaboration</key><true/>	True
Reporting	DisableReporting	boolean	Turn off Application usage reporting. Please note that if you change this setting, then we will no longer be able to provide app usage reports.	<key>DisableReporting</key><true/>	True

7. Appendix: Network requirements

Please visit [Network Requirements of Explain Everything](#).

8. Appendix: Single Sign On (SSO)

Explain Everything supports Single Sign-On with Google, Apple, Microsoft, and Clever.
Please visit [Single Sign on to Explain Everything](#) for details.
